| <p>Inicia con la formación de pequeños núcleos en Copacabana y Medellín, los cuales se intensifican y disipan rápidamente, con la formación adicional de núcleos de baja intensidad de forma generalizada sobre el valle. Cerca de las 03:30 se concentran las precipitaciones sobre Barbosa con núcleos de alta intensidad, con precipitaciones de baja intensidad en los demás municipios del norte y la ladera occidental del valle. A las 5:30 se disipan las altas intensidades en Barbosa y se presentan dos nuevos núcleos; uno en La Estrella y el otro en San Antonio de Prado, que se disipan rápidamente, dejando únicamente bajas intensidades. Al rededor de las 5:00 am ingresa un sistema con núcleos de altas intensidades por el sur del municipio de Caldas, cubriendo La Estrella, Itagüí, Sabaneta y el occidente de Medellín, mientras el sistema se desplazaba hacia el Norte se disipó y fue perdiendo intensidad hasta salir completamente del Valle.</p>   |  |       |                                   |                |   |                 |       |     |                               |       |     |  |       |    |                     |       |    |                              |       |   |                              |       |    |                         |       |   |                            |       |   |                          |       |     |                           |       |   |                        |       |    |                                      |       |     |  |       |     |                              |       |     |                 |      |    |                    |     |     |   |      |    |                             |      |    |                   |      |    |                 |      |    |                    |     |    |                         |     |    |                                    |      |    |                         |      |    |                 |      |    |                                  |      |
